

PISCO / Caselle Lab

MPA Monitoring Summer Internship 2022

June 20th - Sept. 15th

What we do:

For over 20 years, our research team has conducted SCUBA surveys every summer at over 50 sites in the SB Channel including Anacapa, Santa Cruz, Santa Rosa and San Miguel islands. Our data provides critical ecological data for countless research projects and informs management and conservation of our nearshore ecosystem.

What you will do:

- Work as part of a team diving in amazing locations (most interns make over 100 dives) and performing various tasks in lab
- Receive training in monitoring protocols and the identification of local algae, invertebrate, and fish species
- Gain experience with marine boating and navigational techniques

Come dive the Channel Islands!
Paid positions available!

To apply, email the following to Chris Honeyman choneyman@ucsb.edu
by **April 8th:**

1. Major/Class Standing
2. Resume/CV (include diving experience)
3. Tell us a little bit about why you're interested in this position (can replace #2)

Qualifications & Commitments:

Interns must:

- Be available to work continuously from the end of Spring Quarter to the beginning of Fall Quarter (June 20 - Sept 15)
- Have **Active** AAUS Research Diver Status by June 20th, 2022
- Be able to work long days, including some multi-day dive trips
- Work independently before the start of the field season to study training materials provided
- Have the flexibility to work both in the field (subtidal and intertidal) and in the lab (data entry, sample processing, equipment preparation and maintenance, etc.)
